

```
class Print Java {
```

```
    public static void main(String [] abc) {
```

```
        System.out.println("    ]    A    V    V    A");
```

```
        System.out.println("    ]    A    A    V    V    A    A");
```

```
        System.out.println("    ]    ]    A    A    A    A    V    V    A    A    A    A");
```

```
        System.out.println("    ]    ]    A
```

```
    }
```

```
class RectangleArea {  
    public static void main (String[] abc) {  
        int height = Integer.parseInt(abc[0]);  
        int width = Integer.parseInt(abc[1]);  
        int area = height * width;  
        System.out.print("Area = " + area);  
    }  
}
```
